

Revitalzon

**Specially indicated for devitalized
and dull skin**

**Micro-needling Therapy with
Goldpen + Revitalzon**

Revitalzon revitalizes and enhances skin resistance, increasing its elasticity and brightness. It promotes cell regeneration, keeps skin hydrated and helps to correct premature wrinkles, reducing the appearance of imperfections. It rebuilds the cellular matrix in ageing or damaged skin, while also creating a protective barrier that prevents moisture loss and keeps skin hydrated.

By applying the solution with the **Goldpen micro-needling therapy** system, results are improved. The action of the micro-needles enhance the production of collagen and elastin and create a skin renovating effect. The biological actives contained in the applied solution, stay in the dermis longer than if they were injected using mesotherapy, achieving better results in a shorter period of time.

INDICATIONS

Revitalzon is indicated for treatment of devitalized and dull skin, and those skins that show signs of premature ageing and wrinkles.

PROTOCOL

It is advisable to begin the treatment by applying a peeling gel (**Step 1 peeling system**) at least one week before the first session with Revitalzon and Goldpen to enhance results. Your skin will be cleaner and more ready to react to the actives in the applied solution, and at the same time, your skin will have already been induced to create new collagen and elastin.

- Step 1 If necessary, apply a desensitizing cream on the area to be treated to prevent discomfort for the patient during the procedure. Allow it to act for half an hour.
- Step 2 Remove the desensitizing cream and clean the skin with a soft tissue.
- Step 3 Apply a disinfectant solution on the area to be treated.
- Step 4 The patient should remain laying down to facilitate comfort throughout the process.
- Step 5 Open one ampoule of Revitalzon and load its contents into a syringe using a discharge needle (e.g. 18G)
- Step 6 Insert a new cartridge needle in your Goldpen and remove the cap.
- Step 7 Adjust the needle for desired depth (forehead: 0.5mm, cheek: 1 to 1.5mm, eye contours: less than 0.5mm, around lips: 1mm, body skin: 1.5-2.00mm).
- Step 8 Apply a few drops of Revitalzon solution on the area to be treated. Do not apply the product on the entire surface to prevent spillage while turning the patient's head during the procedure. It is better to apply a few drops as you advance with the Goldpen.
- Step 9 Pull slightly to maintain the surface of the skin flat and apply the Goldpen on the area by drawing small circles or lines on the skin. Continue for a few minutes, but remember it is not necessary to provoke a strong erithema to achieve good results. The Goldpen micro-needles work at 120 cycles per second, so it might occur that redness appears slower than you proceed with the treatment. If after the treatment there are areas where skin stays white, without redness, you may need to repeat the procedure in this area. Micro-bleeding may occur in treated areas. This is perfectly normal .
- Step 10 Once you complete the procedure with the Revitalzon Solution on the area, apply a Hydra Gel Mask and leave it on for 20 minutes.

Repeat the procedure with the Goldpen and Revitalzon once a week for at least 4-5 weeks. After, and following the doctor's indications, more sessions may be advisable at one or one and a half month intervals. Repeat a maintenance treatment after one year.

AFTER TREATMENT

Avoid using make-up during the following 24 hours.

Do not visit a sauna, practise intense sports or apply any other facial treatments for the following 48 hours.

Always use sunscreen for a few days after a micro-needling treatment and avoid sun exposure. In any case, we recommend the use of a sunscreen cream as a daily habit.

RECOMMENDATIONS DURING THE PROCEDURE.

1. Make sure you select the right depth and speed of the needles for each area to be treated.
2. As a general rule, the deeper the needles go, the faster they should work. However, we always recommend a faster speed in order to avoid needles from hooking and scratching the skin.
3. Needles Cartridges are for single use only. Do not re-use the same cartridge, even for the same patient.
4. Do not press your Goldpen on the patient's skin - move it smoothly. If you need the needles to go deeper, adjust the depth on your Goldpen.
